

STOMOCUR®

Gelatine-free Ostomy Care

Maintaining healthy peristomal skin can be a challenge. FORLIFE has developed a line of particularly gentle hydrocolloid skin protection without gelatine or other animal components, for all ostomates with sensitive skin.

- » Gentle on the skin
- » Thin and flexible
- » Excellent adhesion

The hydrocolloid skin protection without gelatine combines the proven protection of a hydrocolloid supply with the ability to offer high-quality care to patients who do not use ostomy products containing gelatine or other animal ingredients. The ultra-thin skin protection adheres well to the surrounding skin. Additionally, the combined softness and high flexibility of the supply counteract mechanical irritation of the sensitive skin surrounding the stoma, ensuring a high level of comfort and long wearability.

Order information:

Item name	Version	Item number	Stoma opening	Package contents
STOMOCUR® Select gelatine-free	window	CSG20	20 mm – 60 mm	30 pieces
