

STOMOCUR®

Fixing strips – reliable care for the areas surrounding a stoma

STOMOCUR® Fixing strips are used to expand the adhesive surface area at the edges of your stoma care.

Elastic fixing strip for stoma care

The quality and reliability of FORLIFE products ensure your satisfaction. To fulfil these quality standards, FORLIFE continually optimises and expands the products in its STOMOCUR® product line.

We would like to introduce our elastic fixing strips from our range of accessory products.

The STOMOCUR® fixing strips expand the adhesive surface area located on the edge of the stoma baseplate.

They prevent the edges of the baseplate from coming off or rolling up, thus increasing the level of security. Thanks to their elasticity, you are not restricted in your freedom of movement and can wear your stoma fitting for longer – Choose that feeling of enhanced security!

STOMOCUR® Fixing strips

Expands the adhesive surface area for your stoma care, ensuring greater security and convenience

- ✓ Prevents the baseplate from coming off or rolling up
- ✓ Extension of the wearing time of your stoma care
- ✓ Highly elastic and extremely skin-friendly
- ✓ Use of one or two fixing strips possible
